Product Data Sheet

Product: Antiblock Master Batch

Grade:AE-12013

Product description:

Debs AE-12013 is a antiblock master batch and after addition in polymer film its create gap between two plastics film surface(layers) due to which avoid sticking of two plastics film surface(layers) and become easy to open and avoid sticking of film during binding on roll

Typical recommendation:

This grade is recommended for blown film applications.

Recommended dosage level is 0.5- 1% or can be increase to get desire quality level.

Typical data:

S.No.	Properties	Unit	Specification
1	Base Polymer		Polyethylene
2	Moisture Content	%	<0.1
3	Bulk Density	G/L	850±100
4	Polymer film surface @5% loading		smooth

Storage condition: Material should be stored in a cool and dry place, away from direct source of heat & sunlight.

Shelf life: This grade shelf life is two years from date of manufacturing under normal storage conditions.

This additive master batch tested in our lab at our standard testing condition and results may varies under different condition depending upon the accuracy of man and machines.

Debs International Factory does not give any liability of the abnormality occurs during processing. This is the sole responsibility of user and this is recommended to test the material for suitability of the grade
